PROFESSIONAL SUMMARY

Information Technology undergraduate with a strong foundation in Core Java and backend development concepts. Experienced in building RESTful APIs using Spring Boot, implementing CRUD operations, and integrating Java applications with SQL databases using Hibernate/JPA. Actively learning enterprise backend systems and eager to contribute to scalable, real-world applications as a Java Developer.

EDUCATION

- **Rajalakshmi Engineering College (REC)**

B.Tech. in Information Technology; CGPA: 8.05/10

Tamil Nadu, India

September 2024 – April 2028

PROJECTS

- **Pharmaceutical Cold Chain Tracking System**

Sep 2025 – Oct 2025

Academic Project — Java Backend & Database Systems

- Designed and developed backend business logic using **Core Java** to manage pharmaceutical shipment data and temperature records.
- Implemented CRUD operations for shipments, warehouses, and temperature logs using Java service layers.
- Designed and optimized a MySQL relational database schema, including normalized tables and primary – foreign key relationships.
- Implemented automated alerting logic to detect temperature threshold violations and ensure data integrity.
- Focused on backend validation, data consistency, and system reliability for mission-critical use cases.

- **Student Management REST API**

Dec 2025

Personal Project — Java, Spring Boot, Hibernate

- Developed a RESTful backend application using Spring Boot following Controller–Service–Repository architecture.
- Implemented REST APIs for student creation, retrieval, update, and deletion (CRUD).
- Used Hibernate (JPA) to map Java entities to relational database tables.
- Tested APIs using **Postman** and validated request–response flows.
- Ensured clean, readable, and well-documented code for maintainability.

- **Skill Tracker and Custom Roadmap Generator (ZkioAd)**

Aug 2025

Academic Project — Full Stack Exposure

- Collaborated on a full-stack learning platform to track user skills and progress.
- Primarily contributed to logic design, data handling, and system workflows.
- Gained experience integrating frontend components with backend-style data structures.

CERTIFICATIONS

- **Responsive Web Design** – freeCodeCamp
- **Generative AI Skills for Creative Content** – LinkedIn Learning

SKILLS

- **Programming Languages and Problem Solving**

- **Java** – Core Java, Object-Oriented Programming (OOP), collections, exception handling; used for solving algorithmic problems and backend application development
- **C** – Strong foundation in Data Structures and Algorithms, including arrays, strings, linked lists, stacks, queues, recursion, and basic searching techniques
- **Python** – Used for solving easy-level algorithmic problems and basic scripting

- **Data Structures and Algorithms**

- Proficient in implementing core data structures using C
- Comfortable solving easy-level problems on platforms such as LeetCode using Java, C, and Python
- Strong understanding of problem decomposition, edge-case handling, and time–space complexity at a foundational level

- **Backend Development**

- Java backend development fundamentals
- **Spring Boot** – RESTful API development, request handling, dependency injection (beginner level)
- **Hibernate / JPA** – Entity mapping, CRUD operations, and ORM fundamentals

- **Databases**

- **SQL** – Table design, primary and foreign keys, CRUD operations, and basic joins
- Experience integrating Java applications with relational databases

- **Web & API Concepts**

- RESTful API principles
- HTTP methods: GET, POST, PUT, DELETE
- JSON-based request and response handling

- **Tools and Development Practices**

- Git and GitHub for version control
- Postman for API testing and validation
- IntelliJ IDEA / VS Code for Java development
- Familiar with using AI tools for learning, debugging, and improving code quality
